FLIGHT MANAGEMENT SYSTEM

Introduction

- The Flight Management System is a cutting-edge, Java-based booking solution designed to simplify the process of booking and managing flight tickets.
- With its real-time consolidation of data from multiple airline carriers, the system provides users with accurate and up-to-date information on available flights, schedules, and rates.
- This intuitive and user-friendly application empowers travelers to make informed decisions about their travel plans, while also streamlining the management of bookings for administrators.

Project Overview

CUSTOMER FEATURES

- **CREATE** A NEW USER ACCOUNT TO ACCESS THE APPLICATION.
- **LOGIN** WITH YOUR USERNAME AND PASSWORD.
- **SEARCH** FOR AVAILABLE FLIGHTS BY DATE AND DESTINATION.
- **BOOK A FLIGHT** BY SELECTING YOUR PREFERRED FLIGHT AND PROVIDING PASSENGER INFORMATION.
- **VIEW** PAST BOOKINGS, INCLUDING FLIGHT DETAILS AND PASSENGER INFORMATION.
- **CANCEL OR MODIFY** A PREVIOUSLY BOOKED FLIGHT IF NECESSARY.

Project Overview

Administrator Features

- **Login** into the application to manage flights.
- **Add** flight, schedule, and route details, including information such as flight numbers, departure and arrival times, and routes.
- **View** existing flight, schedule, and route details for easy reference.
- **Cancel or modify** flight, schedule, and route details as needed.

MILESTONE

1

The system allows users to register, log in, and verify email addresses, with password reset functionality and security measures to protect user data.

2

Database schema for airport and flight information includes four tables: Airports, Flights, Schedules, and Availability.

3

Design a user-friendly flight booking interface. Implement functionality for users to select flights, time slots, and airports. Integrate the scheduling interface with the backend for secure booking details storage.

4

Design a database schema to store flight schedule details. Implement backend functionality for booking, conflict prevention, and scheduling management. Develop an intuitive interface for flights and passengers to view and manage schedules.

REQUIREMENT SPECIFICATION

About Us

FlyHighHub.com is one of the leading travel organisations in India, aiming to offer exclusive travel services to diverse explorers.

Established in 2008: Pioneering India's Online Travel Landscape

Established in 2008, FlyHighHub.com is India's second-largest* online travel platform. Operating initially from a small space, we overcame challenges through determination and familial support, evolving into a resilient entity ensuring financial stability. Transitioning to a customer-facing model in 2011, we adopted a 'no convenience fee' policy, attracting a loyal customer base with transparent pricing and exceptional service.

Flight Reservation System 2024

CONCLUSION

The Flight Management System is a Java-based booking solution that consolidates data from multiple airline carriers, providing real-time information to users. The system caters to two types of users: **customers** and **administrators**. Customers can create an account, login, check available flights, book, view bookings, and cancel or modify bookings. Administrators can login, add flight, schedule, and route details, view these details, and cancel or modify them. The system provides a seamless booking experience for customers and simplifies the management of bookings for administrators.
